

Her security is important

Give her the protection she deserves with the RoamAlert[®] system

*The wander prevention system that supports resident locating,
personal emergency response and asset tracking*

*From wander prevention to personal emergency response, the **RoamAlert** system has you covered*

The RoamAlert® system gives you the tools you need to protect your residents when and where they need it. No other product offers the same level of flexibility and scalability, combined with ease of use for staff and administrators.

Here's how the system works. Each resident wears a small radio transmitter (the smallest and lightest on the market). Exits are protected by door controllers. When a resident approaches an exit, the door controller locks the door to prevent the resident from leaving; or if the door is open, an alarm sounds.

Beyond this essential functionality, the RoamAlert system offers you a wide range of options for central reporting, integration with other security systems, and even other applications such as personal emergency response and resident locating.

RoamAlert[®]
WANDER PREVENTION SYSTEM

No matter what your needs, the RoamAlert system has the solution that will keep your residents safe.

The next generation of resident protection technology

The highly competitive long term care market is all about service to residents—and no service is more important or more basic than security.

The RoamAlert system gives you a customized solution to keep your residents safe and secure.

The system provides not only wander prevention, but can also be expanded to include personal emergency response and resident locating. Residents and staff can call for help from anywhere in your facility at any time, and in an emergency you can locate any resident. The system even supports asset tracking to protect valuable mobile assets like wheelchairs and laptop PCs.

All alarm information is presented in an intuitive visual format. The name of the resident, his/her location and even a picture can be displayed on PCs installed at one or several nurse stations around your facility. And for bypassing doors, staff members simply need to wear their staff pendant tags: doors will unlock automatically and the system will record the identity of the staff member and the residents he/she is escorting.

Administrators will appreciate the detailed logs showing the time of the alarm, the resident's name and which staff member cleared the alarm. Such information is invaluable in documenting a wander incident and staff response, and can help family

members understand when their loved one's condition has changed, requiring a change in their level of care.

Most importantly, the RoamAlert system helps you customize resident care to give each resident the maximum possible freedom compatible with their safety. The system can be programmed to enable a resident to pass through certain exits—to reach a common area, say—while all other exits and residents remain protected.

The RoamAlert system lets us meet the individual needs of our residents. We can customize protection at each door, and locate residents at any time; and that means that we can keep residents safe while leaving them free to move about.

Bob Letkeman — Deer Lodge Centre, Winnipeg, MB

RoamAlert ECO: Affordable stand-alone door coverage

The RoamAlert ECO product provides stand-alone coverage of one or several doors to prevent resident wandering.

The simple and reliable protection provided by the RoamAlert ECO product is the right solution for facilities with one or two exits to monitor, and only a few residents in need of protection.

Built on the same highly reliable FM technology as the RoamAlert system, ECO is not prone to false alarms or interference, ensuring trouble-free operation for years to come. The adjustable capture range also means that you can cover single or double doors with just one door controller.

For your staff, the ECO product is straightforward. The few procedures necessary are learned in minutes, and time-saving features—like easy, secure bypass of exits via a keypad—help ensure high staff productivity. Staff members can concentrate on what they do best: caring for residents.

RoamAlert ECO also grows as your needs change. It can cover elevators, and supports display of the resident tag ID number at the door with the optional ID Display unit, and central alarm annunciation. It also integrates easily with nurse call, access control and fire safety systems. Best of all, the ECO product can be upgraded to the fuller functionality of the RoamAlert system.

The RoamAlert resident tag is the smallest and lightest on the market.

The unique advantages of the RoamAlert system

Individual passcodes & passwords

The RoamAlert system features individual user passwords for software access *and* bypassing exits, so that only authorized staff can escort a resident through a door.

Detailed log of who did what

With the RoamAlert system, you have a detailed log of all system activity, including the time, the resident, and the staff member.

Secure “day pass” for family visits

For family visits, the Transport command lets you grant temporary absence to a resident without revealing passwords to family members.

Control over *all* exits

The RoamAlert system can tie into your access control system to prevent someone from inadvertently bypassing a door when a resident is nearby.

Flexible resident protection

The RoamAlert system lets you customize the level of protection for each resident—letting them pass through some exits, but not others—giving them the maximum freedom compatible with their safety.

About VeriChip

VeriChip is a subsidiary of Applied Digital and provides state-of-the-art RFID security solutions that identify, locate, and protect people, their assets, and their environments. From the world's first and only FDA-cleared, human-implantable RFID microchip to the only active RFID tag with patented skin sensing capabilities, VeriChip's technology ensures the safety and security organizations are looking for. Its market-leading infant protection, wander prevention, asset tracking, and patient identification applications make VeriChip the predominant RFID solutions provider in the healthcare industry. And today, VeriChip systems are installed in over 4,000 locations worldwide in healthcare, security, industrial, and government markets making it the world's premier RFID company for people.
